

# RECONSIDERING MILL CREEK

Washington State University  
**Landscape Architecture**  
students are creating a  
conceptual master plan for  
the restoration of a 1-mile  
section of **Mill Creek**  
in downtown Walla  
Walla. Implementing  
concepts of  
**biophilic design,**

students are  
creating a place  
where Walla

Walla can find a  
place in nature and  
the natural world  
(Mill Creek) can  
find its place in  
human society.

Last year,  
members of the  
community began a  
collective  
**dialogue**  
we hope to  
continue,  
ultimately  
bridging  
us closer to  
reconnecting  
this amazing  
natural resource  
with our **built-  
environment.**
