The Landscape Architecture curriculum is structured to teach ecological thinking. To think ecologically is to consider the complex web of relationships among physical, biological, and social systems, and to understand, that indeed everything is linked and also in flux. Through the curriculum students learn habits of linking ecological processes with space making. Thus, students necessarily consider interdependence, reciprocity, and change.

Each year is by a topos or theme. Each topos is spatially and theoretically explored through required course work. The themes are loosely organized around ecological concepts.
